The model animals are applicable in screening promoters or inhibitors to treat and diagnose diseases in the nervous or immune syst caused by deletion of AMSH and/or AMSH-LP. The current sequence represents a mouse AMSH-LP gene fragment

The model animals are applicable in screening promoters or inhibitors to treat and diagnose diseases in the nervous or immune system caused by deletion of AMSH and/or AMSH-LP. The current sequence represents a mouse AMSH-LP gene fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cell death-inducing model non-human animals specifically in nervous immune system for study and analysis of cytokine signal transfer mechanism, applicable in screening promoters or inhibitors.

                                                                                                                                                  Addison's disease, adult respiratory distress syndrome, allergies, CC cirrhosis, disbetes mellitus, gout, Graves' disease, multiple sclerosis, CC cirrhosis, osteoporosis, rheumatoid arthritis, systemic lupus CC osteoarthritis, osteoporosis, rheumatoid arthritis, systemic lupus CC erythematosus, ulcerative colitis and haematopoietic cancer) a neurological disorder (e.g., stroke, epilepsy, Huntington's disease, CC Parkinson's disease, meningitis, prion diseases including kuru, CC Parkinson's disease, cerebral palsy, myasthenia gravis, diabetic neuropathy and Alzheimer's disease). Sptm sequences can be used to detect CC neuropathy and Alzheimer's disease). Sptm sequences can be used to detect CC the presence of or quantifying the amount of sptm-related polymuclectide in a sample. The sptm polymuclectide is used to design probes useful in CC diagnostic assays carried out to detect or confirm conditions, disorders, or diseases associated with abnormal levels of sptm expression. Sptm, its fragments or oligonuclectides derived from sptm may be used as primers in amplification steps prior to hybridisation. The present sequence CC represents the human sptm (101978.1) cDNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hodgson DM, LL,
Bratcher SR, D
                                                                                                                                                                                                                                                                                                                                                                                                                                                          recombinant techniques, the protein may be used to generate anti-sptm antibodies which may be used to analyse protein expression levels in different tissues. The sptm colecules are useful for diagnostic and therapeutic purposes e.g., to diagnose or treat a condition associated with cell signaling such as a cell proliferative disorders (e.g., arteriosclerosis, atherosclerosis, psoriasis, cancers), immune system disorders (e.g., inflammation, acquired immunodeficiency syndrome (AIDS), additions of adults are arteriosclerosis and account of the syndrome allocation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            secretory polynucleotides (sptm) with similarity to signa or transmembrane domain (TM) consensus sequences. The pol sequences of the invention are useful for producing sptm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel secretory polynucleotide (sptm) and polypeptides encoded by sptm, useful for diagnosing and treating disorders or diseases associated with cell signaling e.g., allergy, psoriasis, Grave's disease, epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-AUG-1999;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM4213) with nootropic, immunosuppressant and cytostatic activity. The polypuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                                                                                                                                      Novel

useful: for determining non-cancerous prostate disease, by measuring their expression levels and/or structural alterations; for determining the sample that has prostate tissue-like characteristics or is a prostate tissue, as an element in an array or a multi-analyte test to recognise expression patterns associated with prostate cancer and other prostate related disorders; and as elements in a computer program for pattern recognition of prostate disorders. (I) and (II) are useful for producing transgenic animals and cells and also in gene therapy. This sequence represents a prostate specific nucleic acid described in the

                                                                                                                                                                                                                                                                                                 CC The invention relates to isolated polynucleotide (I) and polypeptide (II) C sequences. (I) is useful as hybridisation probes, polymerase thain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used C in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal C useful for generating antibodies against it, detecting or quantitating a C useful for generating antibodies against it, detecting or quantitating a C polypeptide in tissue, as molecular weight markers and as a food C supplement. (II) and its binding partners are useful in medical imaging C of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The C polypeptide and polynucleotide sequences have applications in C diagnostics, forensics, gene mapping, identification of mutations C amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic C coding sequences of the invention. Note: The sequence data for this C patent did not appear in the printed specification, but was obtained in C electronic format directly from WIPO at sequences.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5
                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIG1676-ABIG1676-ABIG1677), expressed DNA sequences (ABIG1840-ABIG1675) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                       The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding with the antibody of the encoded protein, and observing the binding
                                                                                                                                                                                                                                                                                                                                        New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or

                                                                                                                                                              The present invention describes an isolated polypeptide comprising an immunogenic portion of an ovarian carcinoma protean (or its variants). Ovarian carcinoma proteins, and polypucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful for the prevention, diagnosis and treatment of cancer, preferably ovarian cancer. AAA69691 to AAB10177 and AAB12552 to AAB12557 represent human ovarian carcinoma polynucleotides and proteins used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunogenic portion of an ovarian carcinoma protein and the nuceencoding it, useful for the diagnosis, prevention and treatment cancer, preferably ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-DEC-1998;

The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. Sequence 19, Application US/09338933

Patent NO. 6488931

GENERAL INFORMATION:
APPLICANT: Mitcham, Jennifer Lynn
APPLICANT: Mitcham, Jennifer Lynn
APPLICANT: Ming, Gordon E.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FO:
TITLE OF INVENTION: OVARIAN CANCER
FILE REFERENCE: 210121.462C1

CURRENT APPLICATION NUMBER: US/09/338,933

CURRENT FILING DATE: 199-06-23

NUMBER OF SEG ID NOS: 312

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-831-452-1 (1-424) x US-09-404-879A-19 (1-1043)
